		12" STD	20" D x 24" L

Northern Aluminum Suction Strainers offer a dependable, lightweight, economical strainer that will not rust. Our quick tach clamp allows the strainer to be easily removed from the suction line even after years of use. The mud skid keeps the suction pipe off the bottom. This helps in keeping the line from sinking in the mud and affecting your pumping performance. It also makes it easier to remove the suction pipe from the water. We offer custom-built screens made to fit your particular application.
