Epoxy Coated Tee Riser

90° Epoxy Coated Dog Leg

Northern Agri Services EPOXY FITTINGS offer years of dependable service. Each fitting is coated inside and out with an epoxy resin that is bonded to the steel by an electrical charge, then cured in an oven. This epoxy coating acts as insulation against corrosive chemicals attacking the steel thus assuring long dependable life of the fitting. The steel construction of each fitting offers protection against damage that could occur to the riser because of weather conditions, etc.
